

## Energy Bill Review

Achieve instant energy savings by optimizing your energy bills and release funds you never knew you had.

### What is an Energy Bill Review?

The cost of electricity and gas keeps growing every day, increasing the energy bills of companies.

Energy price is an external factor on which we cannot act, but we actually can assess the tariffs and other elements of the energy bills which increase our monthly energy costs.

An energy bill review consists of checking your existing energy supply contract in order to find if there are potential savings and to optimize the energy bills.

For many businesses, the ever changing energy structure can be difficult to understand, so will make it hard to discover these savings in their energy bills.

IMPACT Energy Solutions will help you to optimize your energy bills, adjusting easily and effectively your energy supply contract and choosing the one which best suits your energy consumption.

**Make an IMPACT on your Energy Bills Today...  
....Reap The Rewards Tomorrow**

As a benchmark in energy saving solutions, **IMPACT Energy Solutions** are always at the forefront of innovative energy efficient technologies and services. We provide our customers with a full solution to reduce both their energy consumption and their CO<sub>2</sub> footprint.

By reading the following energy bill review brochure, you will see how **IMPACT Energy Solutions** can assist you in choosing the right energy supply contract to increase your energy savings.

## How do I avail of this service?

The procedure carried out to review your energy bills is explained below:

1. We ask you for the last 12 months energy bills.
2. We review them without obligation to see if there are potential savings to be made.
3. If no savings are achieved, there is no fee. If we find savings we will implement them on agreeing a 40% of first year savings only.
4. IMPACT Energy Solutions will review client energy bills for the following 12 months to ensure all savings measures have been adhered to by the relevant energy supplier.

**Funded from Savings**  
**NO savings, NO fee**

### Benefits

- Release funds you never knew you had
- Provide funding for new energy efficient projects
- Beat the energy price hikes
- Have piece of mind that you have control over your energy bill
- Ensure you are not using excess energy

## What we do

There are 5 main factors that affect your energy bills and which will be assessed by IMPACT Energy Solutions

- **Tariffs**

There are a range of electricity and gas tariffs available to customers. Most businesses are not aware of the types of tariffs available and find it difficult to select the most appropriate tariff for their consumption pattern. Some businesses are actually on the incorrect tariff and are therefore paying more for their electricity and their gas than they need to be. We will advise on and implement the best tariff for each electricity and gas account.

- **Maximum Import Capacity (MIC)**

The Maximum Import Capacity is the capacity level which is required by a business. In other words, the MIC is the connection agreement between your electricity account and ESB Networks. This is an important factor for several reasons. First of all, the MIC is the capacity that ESB Networks commits to deliver to your company. This value also represents the maximum load that you can import from the electricity network for your business. If the MIC is not the appropriate, you can incur important connection charges. It can be too high or too low for your needs. In both situations it means an extra charge. If the MIC is too high, you may be paying for more capacity than you require. In case MIC is too low, you will pay penalty charges.

- **Supplier Offers**

There are a number of electricity suppliers in the market. Depending on the consumption and demand profile of your business, there are supplier offers there to suit your needs. Each supplier has its own pricing and tariff structure and customers find it confusing to select the best supplier offer for their particular electricity patterns. As with any market, knowledge of its movements and how it operates gives invaluable leverage to purchasers. We will analyse the energy market supplier offers and select the most competitive price for each electricity account.

### • Low Power Factor

In an electric power system, a load with a low power factor draws more current than a load with a high power factor for the same amount of useful power transferred. This is why the electricity supplier levies a charge for 'wattless' or 'low power factor', which is when the level of this factor drops below 0.95. In commercial premises, there are likely to be items of electrical equipment that require wattless energy to operate. Wattless energy is measured separately from your general units, and if you exceed a certain limit, it will give rise to separate charges. These unnecessary charges can easily be eliminated if reviewed.

### • Incorrect Meter Readings

This factor is becoming more and more common in small to medium sized commercial businesses. ESB Networks only read the meter maximum four times per year, normally twice. We have found that many businesses are being charged for incorrect meter reads. Installing an on-line meter would eradicate any incorrect meter reads and also under/overestimated reads. Energy Sense Ireland will help you to deal with this issue by contacting ESB Networks.

The above price factors greatly influence the unit price of electricity that a business pays for its energy purchases. By using our extensive experience in energy bill reviews, IMPACT Energy Solutions can assess your bills thoroughly, ensuring that you are paying the lowest price for electricity purchase

**At IMPACT Energy, you will get a total energy bill solution.
